Poultry and swine equipment with
expert service around the world

Maxplus Feeder Systems® components by INDIV® are innovative developments applied to optimal poultry feeding in all of its growth stages

- Maxplus NG Feeder Systems® are scalable and can be arranged in accordance with the poultry producers' needs.
- They stand out because of their easy and simple operation.
- Feed flow is automatically regulated.
- Chicks are properly fed from the first day.
- Adult birds' feeding is always available.
- Very low feed waste.
- Excellent hygiene-sanitary conditions for birds.

Supplementary Feeder TURBOGROW®

The TURBOGROW® supplementary feeder is an effective assistant for chick feeding during the first days of the breeding cycle.

It can be used for manual filling of the automated line and in sectors far from the line.

Complementary Feeder TURBOGROW 2®

The TURBOGROW2® complementary pan is inserted between the automated pans.

Placement of the feeder is recommended for chicks from day 1 through day 12, when birds reach the size that allows feeding from the automated pan.

The design –narrow and rounded in its front profile– creates a usable 100 cm perimeter, 20 % larger than a circular model, which allows a density of between 75 and 100 birds.

Main benefits

- Birds feed more comfortably and consume more feed.
- Larger live weight at first week of age (>10 g).
- Live weight increase – of 1.5 to 3% – at the end of the flock cycle.
- Low feed waste.
- Fast assembly and disassembly.
- Easy to wash and store.

Complementary Feeder TURBOGROW 3®

“ACCELERATOR” Supplemental Feeder was designed for use in between the lines of automatic feeders for manual feeding.

The large capacity feed hopper holds 18lbs which requires less filling.

The special design pan, and 70 degree slope allows the use of any type feed. This also allows for minimal feed waste and keeps chicks out of the pan.

The feeder has 6 feed windows and has been reinforced in over 40 points to ensure a long life for this product.

Dimensions

Pan Height: 2.1”
Overall Height: 15.35”
Diameter: 11.42”

Feed capacity:
18 pounds.

Recommended density:
50-100 baby chicks

Feed Dispenser

CHICKPLUS

For any type of metal tube

New Feeder MAXPLUS NG®

The modern design and new colors for the NG® feeder line were selected to attract birds to the feed pan, improving feed conversion in all stages of growth.

5
Year
Warranty

2 models are available:
NG-4C - With 4 Spoke
NG-14C - With 14 Spoke

The NG® feed pan has a new, streamlined design and features a 14” diameter.

Rim-to-floor pan height allows the chicks easy access to feed.

For brooding, the pan is flat on the floor; with the feed flow height within the pan allowing birds to consume without wasting or spilling feed on the floor.

The new technical design of the NG® feeder, with the high quality plastics utilized, ensures years of trouble free use.

The NG® feed pan can be easily assembled or disassembled for quick and easy cleaning.

As the birds grow and the pan is raised, there are 4 possible regulations for feed flow in accordance with the user's needs.

Each unit can be removed or replaced without having to disassemble the tubing.

The NG® feed pans include as standard a feed opening and shut-off valve.

Feed distribution

Feed distribution through the dosing bar is performed by a motor unit equipped with a gear reducer.

In either case, a control plate operates as a register for the automatic dosing system.

Feeding system with control by gearmotor

New control plate suitable for lines of INDIV feeders like other brands.

Also available is a drive unit with pulley control.
